\*RPC: Readers Per Copy refers to the fact that most copies are read and passed on to others. By most metrics this figure varies wildly from 2-47, based on a host of factors. An RPC metric of 4 is conservative, and regionally appropriate.

Our RPC is a conservative estimate based on an amalgam of NA/UK/MENA statistics. (Source: PMB & Mediamark)

\*\*ROPI: The Reading Occasions Per Issue metric refers to the fact that most people do not sit and read a magazine in one sitting, but rather over several occasions throughout the month. (Source: Magazine Page Exposures, Audits & Surveys)
